ABOUT THE CONFERENCE

Historically, warfare in the civilizational spectrum was completely a human affair ably assisted by natural life forms (animals and vegetation) with justified and unjustified rationales. In the moral sense, the discipline of international law and its disciples both promote universal well-being, peace, harmony, and prosperity for humanity and all life forms. In effect, war is positioned only as an exceptional institution in exercising self-defence and confronting injustice and aggression. Thus, the birth of International Humanitarian Law (IHL) is primarily devoted to the cause of finding the balance between Principles of Military Necessity and Humanity. However, in the landscape of World War I and II, the atomic droppings in Hiroshima and Nagasaki alerted the humanitarian mission and legal systems towards an age of machinery-dominated and controlled warfare. The notion of scientific uncertainty of weapons systems and its catastrophic effect on human and ecological life on the theme of existential challenge has been much debated since the St. Petersburg Declaration of 1868, Brussels Conference, 1874, Hague Regulations 1907, Geneva Conventions 1949 and Additional Protocols of 1977. The ICRC discharging its role as the guardian angel in achieving the spirit of IHL has periodically raised the use of Automated Weapons Systems (AWS) and its ill consequences on the maintenance of the laws on humanity.

Furthermore, the ever-increasing warring States practice of the experiment and reliance of AWS oriented Lethal Weapons Systems (LWS) and patronization of Artificial Intelligence in the modern combat situations has led to hydra-headed challenges of disrespect to the foundational principles of IHL such as the precaution, distinction, and proportionality, breach of combatant non-combatant immunity and privileges, human and ecological security crisis. Cruelly, the century-old problem of scientific uncertainty in the context of AI-led weaponry has maximized the superfluous injuries and unnecessary suffering of the beneficiaries of the field of the IHL system itself. Factoring the above, this Conference rightly recognizes the need for the international academia and research expertise to deeply contemplate and propose insights on prevention and remedy-based solutions on specific enquiries such as: (i) Does the existing IHL system and its jurisprudence capable of regulating the dynamics of AI dominated modern warfare? (ii) Is there any other *lex specialis* to oversee the AI technology-backed modern warfare? (iii) Is there sufficient dissemination of knowledge about AI technology to international actors? (iv) What is the responsibility of international humanitarian Legal scholarship to predict and prepare humanitarian norms to engage in proper and improper use of AI technologies in warfare?
